Paystack Reconciliation Guide for Hotels

A repeatable weekly process for matching Paystack settlements to guest folios, without the month-end scramble.

Finance Guide · Updated April 2026

For: hotel finance teams and owner-operators

Published by XYVOO — hotel management and storefront software. This guide is provided for general information and reflects practices we've seen work across the properties and shops we support; treat figures and thresholds as a starting point to adapt to your own operation.

Why reconciliation slips

Card payments and guest folios drift apart for ordinary reasons — a partial refund, a chargeback, a payment taken against the wrong room, a settlement that lands two days after the transaction. None of it is unusual. The problem is that most properties only look at it once a month, by which point ten small mismatches have become one large, unpleasant investigation.

A short weekly check keeps this to minutes instead of hours.

The weekly reconciliation routine

- ☐ Pull Paystack's settlement report for the week — total settled, total fees, total refunds.
- ☐ Pull your folio system's total card receipts for the same date range.
- ☐ Compare the two totals first, before checking individual transactions — if they match, you're largely done.
- ☐ Where the totals don't match, sort both lists by amount and date, and work through them in order rather than searching at random.
- ☐ Log any genuine discrepancy (not just timing) with the guest name, room and amount, and resolve it the same week.

The three kinds of mismatch

Type	What it looks like
Timing difference	A payment taken late Sunday settles the following Tuesday — it's in this week's folio total but next
Fee difference	Paystack's percentage fee is deducted before settlement — your folio shows the gross amount, the settlement shows net. Paystack charges gross, then applies the fee total separately.
Genuine mismatch	A refund processed in Paystack that was never applied to the total, or a payment posted to the wrong room. This is the only category that needs real investigation.

Handling refunds and chargebacks

A five-minute month-end check

Once the weekly routine is in place, month-end becomes a summary, not an investigation:

- ☐ Total settled for the month matches the sum of the four (or five) weekly settlement totals.
- ☐ Total refunds for the month matches the sum of the weekly refund logs.
- ☐ No open items remain in the weekly discrepancy log older than seven days.
- ☐ Paystack's fee total for the month reconciles against your accounting system's payment-processing expense line.

WORTH KNOWING

Almost every 'reconciliation nightmare' we've seen traced back to refunds applied in the payment processor but never mirrored on the folio. Fixing that one habit — same-day refund posting — removes most of the problem before it starts.

How XYVOO helps

XYVOO's Paystack integration posts settlements straight to each guest's folio and flags anything that doesn't match automatically, so the weekly routine above is mostly a five-minute confirmation rather than a manual comparison.
